The Census has low response rates in some areas and among certain population groups, who are at risk of being undercounted. Some of these hard-to-count population groups include certain racial and ethnic minority groups and children under age 5. For example, of all children under age 5 living in Congressional District 8, **56%** lived in areas at greatest risk of undercount. Census 2020 will be the first time that the Census is conducted using internet responses in addition to mail-in and in-person responses. As a result, households with no or limited internet access may also be at risk of not being counted.
