

# NEW JERSEY COMPLETE COUNT COMMISSION

NJ 2020 CENSUS

The criteria used is from the US Census Bureau's 2019 Tract Level Planning Data Base. The Planning Database (PDB) contains select American Community Survey (ACS) 5-year estimates, ACS response rates, and the Census Bureau's low response score (LRS), where the LRS is a tract-level predicted value of self-response. Tracts considered Hard to Count for the purposes of this grant were those tracts that had a high LRS score which indicates probability of low self-response. The top 50% of New Jersey tracts and their population totals, based on the LRS, were selected as the Hard to Count tracts within each County and Municipality.
